Amdt. dated: April 26, 2006

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2143

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1-14. (Canceled)

15. (Previously Presented) A method for identifying members of a group, comprising the steps of:

determining dynamic members of a first group based on a rule that defines dynamic membership for said first group, wherein said rule is stored in a dynamic rule attribute of an identity profile of said first group;

storing an identification of each of said dynamic members of said first group; receiving a request to report members of said first group, said request is received subsequent to said step of storing; and

reporting said dynamic members of said first group in response to said request, said reporting of said dynamic members is performed based on said stored identification of said dynamic members.

16. (Previously Presented) A method according to claim 15, wherein: said first group includes one or more static members;

an identification of each of said static members is stored in a static member attribute for said identity profile of said first group; and

said identification of each of said dynamic members is stored in said static member attribute for said identity profile of said first group.

Amdt. dated: April 26, 2006

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2143

17. (Previously Presented) A method according to claim 15, wherein: said first group includes one or more static members;

PATENT

an identification of each of said static members is stored in a static member attribute for said identity profile of said first group;

said identity profile of said first group also includes an expansion attribute; and said method can only be performed if said expansion attribute includes an appropriate value.

- 18. (Previously Presented) A method according to claim 17, wherein: said method can only be performed for an entity having access to said expansion attribute and said dynamic rule attribute.
 - 19. (Original) A method according to claim 15, wherein: said steps of determining and storing are automatically repeated.
- 20. (Original) A method according to claim 15, wherein: said steps of determining, storing and receiving are performed by an integrated identity and access system.
- 21. (Original) A method according to claim 20, wherein: said integrated identity and access system is capable of performing authorization services based on membership in said first group.
- 22. (Original) A method according to claim 15, further comprising the steps of:

determining nested members of said first group; and

storing an identification of each of said nested members of said first group, said step of reporting includes reporting said nested members based on said stored identification of said nested members.

Amdt. dated: April 26, 2006

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2143

23. (Original) A method according to claim 22, wherein: said nested members include members of multiple levels of nested groups.

PATENT

- 24. (Original) A method according to claim 22, wherein: said step of determining nested members includes recursively determining members of group members.
 - 25. (Original) A method according to claim 22, wherein: said first group includes one or more static members; and said step of reporting includes reporting said static members.
- 26. (Previously Presented) A method according to claim 22, wherein said step of determining nested members includes the steps of:

determining all static group members of said first group;

determining all static and dynamic members of said static group members of said first group;

determining all static group members of said static group members of said first group; and

determining all members of said static group members of said static group members of said first group.

27. (Previously Presented) A method according to claim 22 wherein: said first group and nested groups of said first group include rules defining criteria for being dynamic members; and

said step of determining dynamic members includes the steps of determining a normalized set of said rules and determining which users are defined by said normalized set of said rules, said users defined by said normalized set of said rules are said dynamic members of said first group.

Amdt. dated: April 26, 2006

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2143

28. (Original) A method according to claim 15, wherein: said first group includes one or more static members; and said step of reporting includes reporting said static members.

PATENT

29-34. (Canceled)

35. (Previously Presented) One or more processor readable storage devices having processor readable code embodied on said processor readable storage devices, said processor readable code for programming one or more processors to perform a method comprising the steps of:

determining dynamic members of a first group based on a rule that defines dynamic membership for said first group, wherein said rule is stored in a dynamic rule attribute of an identity profile of said first group;

storing an identification of each of said dynamic members of said first group; receiving a request to report members of said first group, said request is received subsequent to said step of storing; and

reporting said dynamic members of said first group in response to said request, said reporting of said dynamic members is performed based on said stored identification of said dynamic members.

36. (Original) One or more processor readable storage devices according to claim 35, wherein:

said first group includes one or more static members; and said step of reporting includes reporting said static members.

37. (Original) One or more processor readable storage devices according to claim 36, wherein:

said steps of determining and storing are automatically repeated.

Amdt. dated: April 26, 2006

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2143

38. (Original) One or more processor readable storage devices according to claim 36, wherein:

PATENT

said steps of determining, storing and receiving are performed by an integrated identity and access system.

39. (Original) One or more processor readable storage devices according to claim 36, wherein said method further comprises the steps of:

determining nested members of said first group, said nested members include members of multiple levels of nested groups; and

storing an identification of each of said nested members of said first group, said step of reporting includes reporting said nested members based on said stored identification of said nested members.

40-43. (Canceled)

44. (Previously Presented) An apparatus that can determine members of a group, comprising:

a communication interface; and

one or more processors in communication with said communication interface, said one or more processors perform a method comprising the steps of:

determining dynamic members of a first group based on a rule that defines dynamic membership for said first group, wherein said rule is stored in a dynamic rule attribute of an identity profile of said first group and said first group includes one or more static members, storing an identification of each of said dynamic members of said first

group,

receiving a request to report members of said first group, said request is received subsequent to said step of storing, and

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2143

reporting said static members and said dynamic members of said first group in response to said request, said reporting of said dynamic members is performed based on said stored identification of said dynamic members.

- 45. (Original) An apparatus according to claim 44, wherein: said steps of determining and storing are automatically repeated.
- 46. (Original) An apparatus according to claim 44, wherein: said steps of determining, storing and receiving are performed by an integrated identity and access system.
- 47. (Original) An apparatus according to claim 44, wherein said method further comprises the steps of:

determining nested members of said first group, said nested members include members of multiple levels of nested groups; and

storing an identification of each of said nested members of said first group, said step of reporting includes reporting said nested members based on said stored identification of said nested members.
